IT UNA STORIA CHE NASCE DALLA PASSIONE PER LA QUALITÀ

Guidare in totale sicurezza, anche nelle condizioni più avverse e di scarsa visibilità, è il punto di partenza nello sviluppo dei nostri prodotti. Lavoriamo costantemente per garantire che chi guida possa vedere sempre al meglio, sia in marcia che nelle manovre, sviluppando prodotti pensati per ogni condizione e situazione. Che si tratti di lunghi viaggi notturni o semplici manovre quotidiane, l'obiettivo di DQP è uno solo: permettere all'automobilista di vedere sempre al meglio, ovunque e comunque.

EN A STORY BORN FROM A PASSION FOR QUALITY

Driving in total safety, even in the most adverse conditions and in low visibility, is the starting point in the development of our products. We constantly work to ensure that drivers can always see at their best, both on the road and during maneuvers, by developing products designed for every condition and situation. Whether it's long night journeys or simple everyday maneuvers, DQP has only one goal: to allow drivers to always see at their best, anywhere and under any circumstances.

Canbus, Canceller & Decoder

Le lampade a LED assorbono meno corrente rispetto a quelle alogene. Questo può essere rilevato dal computer di bordo, che interpreta il minor assorbimento come guasto e segnala l'anomalia con la spia "lampada bruciata".
Per risolvere il problema è spesso sufficiente installare un modulo **Canbus,** una resistenza statica che simula il carico di una lampada tradizionale ed elimina l'errore

LED bulbs draw less current than halogen ones. The vehicle's onboard computer may interpret this as an error, triggering a "bulb failure" warning light.
*In most cases, installing a **Canbus** module is enough to remove the warning, as it acts as a static resistor that simulates the load of a halogen bulb*

Tuttavia, in alcuni veicoli l'assorbimento elettronico dei LED può causare altri problemi, come **sfarfallio** o ritorno dell'errore dopo l'avvio. In questi casi è consigliato un modulo **Canceller**, che stabilizza la corrente e migliora la compatibilità con l'impianto elettrico.

However, in some vehicles the electronic nature of LED consumption may cause flickering or warning reappearance. A Canceller module is recommended to stabilize current and improve compatibility.

Nei casi più complessi, la soluzione ideale è il modulo **Decoder,** che unisce le funzioni di Canbus e Canceller. Si adatta agli sbalzi di tensione in tempo reale e risolve tutte le anomalie più frequenti:
- Spia errore sul cruscotto
- Accensione asimmetrica
- Sfarfallio all'avvio
- Spegnimenti casuali
- Interferenze radio

*In more complex cases, the **Decoder** module is the best solution. It combines Canbus and Canceller functions, adapts to voltage fluctuations, and solves all common issues:*
- *Dashboard warning light errors*
- *Uneven lighting (one side on, one off)*
- *Start-up flickering*
- *Random shut-offs*
- *Radio interference*

DECODER

La visualizzazione del carico di potenza è il nuovo metodo per imitare le caratteristiche delle lampadine alogene installate in origine
1. Ingresso di alimentazione regolato visivamente a 55 +/- 10 W (nell'intervallo 5-75 W)
2. Temperatura di lavoro inferiore a 50° C, nessuna resistenza aggiuntiva.
3. Anti-EMI per radio, radio e antifurto;
4. Uso universale per faro a LED, alimentatore HID, alimentatore HID ad innesto rapido

Il Decoder sarà in grado di risolvere i problemi Canbus come di seguito:
1) Errore con avviso sul cruscotto:
2) Potenza bassa - impossibile accendere la luce
3) Luce accesa da un lato e spenta dall'altro;
4) Sfarfallio o strobo all'avvio del motore o in qualsiasi momento
5) Si spengono improvvisamente durante il periodo di guida
6) Danneggiamento dell'alimentatore, del LED, del tergicristallo o sistema informatico a causa dell'alimentazione AC parziale.

Parametri:
1) Ingresso di tensione 9-16 V
2) Potenza assorbita: 5-75 W
3) Potenza: 55 +/- 10 W
4) Temperatura ambiente: - 40 ° / + 85 °
5) Frequenza di lavoro: 150 KHz

Ove necessario, utilizzare anche il cavo 941621C che ha funzione da Super Canbus per aumentare il consumo

Power-load visualization is the new method to mimic the characteristic of halogen bulbs.
1) Power input visually adjusted to 55±10W (in the range of 5~75W);
2) Less than 50°C working temperature, no additional resistor;
3) Anti-EMI for audio, radio and anti-theft alarm;
4) Universal use for HID ballast, HID quick-start ballast, LED headlight and LED foglight.

The HMS1 will be able to resolve CANBus issues as follows:

1) Error/warning on dashboard;
2) Low power output - unable to light up a bulb;
3) Light on on one side and off the other;
4) Flicker or strobe when engine is started or at any moment ;
5) Light off suddenly during driving period;
6) Damage of ballast, LED, wiper or computer system by partial AC supply.

Cablaggi ed accenditori di ricambio per Ballast specifici
Replacement Wiring Harnesses and Igniters for Specific Ballasts

In caso di centralina funzionante con cablaggio o accenditore guasto e/o usurato, è disponibile una gamma completa di ricambi specifici per non dover sostituire componenti ancora funzionanti.

In case of a working control unit with a damaged and/or worn wiring harness or igniter, a complete range of specific spare parts is available, so there is no need to replace components that are still functioning.

Come trovo il ricambio adatto per la centralina?
How do I find the right spare part for the control unit?

1. Verifica la centralina con codice OE, AM o con il nostro configuratore Ballast
2. Inquadra il QR Code qua sotto oppure entra nella sezione 'Ricambi per Centraline Xenon) nel nostro sito
3. Cerca il ricambio nei risultati, utilizzando le ultime 4 cifre (ed eventualmente la quinta lettera se presente) a cui aggiungere il prefisso 62. Il cablaggio avrà il finale -C, mentre l'accenditore -I

Esempio: cablaggio e accenditore per il Ballast 9608621.
- Cablaggio: 9628621-C
- Accenditore: 9628621-I

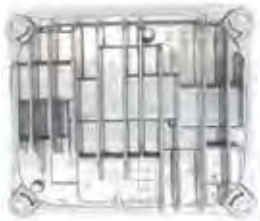

1. Check the control unit using the OE code, AM code or with our Ballast Configurator
2. Scan the QR code below or go to the "Xenon Control Unit Spares" section on our website
3. Search for the spare part in the results using the last 4 digits (and possibly the fifth letter, if present), and add the prefix 62. The wiring harness will end in -C, while the igniter will end in -I

Example: wiring harness and igniter for Ballast 9608621
- *Wiring harness: 9628621-C*
- *Igniter: 9628621-I*
